

Saharan Dust Air Quality Bulletin

Antigua and Barbuda Meteorological Services

5:00 PM Tuesday 13 April 2021

Air Quality Index Based on Particulate Matters 2.5 (PM2.5) and 10 (PM10) Concentration

Air quality category: Moderate

Location: Antigua and Barbuda

Timing: Until Wednesday.

Synopsis: The air quality has fallen to moderate levels, as a result of a fresh surge in particulate matters 2.5 and 10, associated with an increase of Saharan Dust. The threat of health problems is elevated, for mainly unusually sensitive people, such as asthmatics.

Air quality index: 50 to 70

Alert Level: II

Sensitive groups: People with respiratory or heart disease, the elderly and children are the groups most at risk.

Health implications: Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.

Caution: Active children and adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.
