

**Air Quality Bulletin**

Antigua and Barbuda Meteorological Services

9:45 AM Monday 7 June 2021

**Air Quality Index Based on Particulate Matters 2.5 (PM2.5) and 10 (PM10) Concentration**

**Air quality category:** Moderate

**Location:** Antigua and Barbuda

**Timing:** Until Saturday.

**Synopsis:** The air quality is down to moderate levels, as a result of an increase of particulate matters 2.5 and 10, associated with a fresh surge in Saharan Dust. The threat of health problems is elevated, for mainly unusually sensitive people, such as asthmatics.

**Air quality index:** 55 to 80

**Alert Level:** II

**Sensitive groups:** People with respiratory or heart disease, the elderly and children are the groups most at risk.

**Health implications:** Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.

**Caution:** Active children and adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.
