

Saharan Dust Air Quality Bulletin

Antigua and Barbuda Meteorological Services

6:45 PM Monday 27 July 2020

Air Quality Index Based on Particulate Matters 2.5 (PM2.5) and 10 (PM10) Concentration

Air quality category: Moderate

Location: Antigua and Barbuda

Timing: Tonight until Wednesday

Synopsis: The air quality is expected to decline to moderate levels, as a result of a fresh surge in particulate matters 2.5 and 10, associated with a surge in Saharan Dust, streaming across the area. The threat of health problems, for mainly unusually sensitive people, such as asthmatics, will be elevated.

Air quality index: 50 to 100

Alert Level: II

Sensitive groups: People with respiratory or heart disease, the elderly and children are the groups most at risk.

Health implications: Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.

Caution: Active children and adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.
