

Urgent – Marine Weather Message

Small Craft Advisory

Antigua and Barbuda Meteorological Services

8:30 PM Monday 27 July 2020

A small craft advisory goes into effect in 24 hours for the waters of Antigua and Barbuda, the rest of the Leeward Islands and the British Virgin Islands. This will likely be converted to a warning Tuesday night or Wednesday.

Locations (to be) affected: Open waters.

Timing: Tuesday night until Friday.

Synopsis: Fresh to strong winds associated with the development of Tropical Disturbance AL92 are expected to cause the threat levels, at sea, to rise to high, with the potential of extensive impacts to the life and property of mariners. It is still very uncertain as to the eventual path, intensity and size of what may develop out of the Disturbance; depending on the various parameters, seas could be higher or lower.

Winds: Variable at 28 to 46 km/h (15 to 25 knots; 17 to 29 mph), with strong gusts to storm-force of around 70 km/h (38 knots; 44 mph).

Seas (significant wave heights): 2.5 to 4 metres (8 to 14 feet), occasionally or locally reaching over 5 metres (17 feet). Dominant wind wave period is 6 to 9 seconds.

Impacts (possible/likely/expected): Loss of life at sea; injuries to mariners; financial losses; disruption of fisheries and scarcity of fish products and disruption to marine transportation.

Precautionary/preparedness actions: A small craft advisory means that wind speeds of 21 to 33 knots and or wind waves and or wind swells of 7 feet or greater are expected to produce hazardous wave conditions to small crafts. Inexperienced mariners, especially those operating smaller vessels should avoid navigating in these conditions.

Please continue to monitor these hazardous, life-threatening marine conditions. Stay tuned to updates coming out of the Met Office via antiguamet.com
